0.1 Omissions

The following were omitted from the tests due to convergence failures. ODE.jl's adaptivity is not able to stabilize its algorithms, while GeometricIntegratorsDiffEq has not upgraded to Julia 1.0. GeometricIntegrators.jl's methods used to be either fail to converge at comparable dts (or on some computers errors due to type conversions).

```
 \#sol = solve(prob,ode23s()); \ println("Total ODE.jl steps: \$(length(sol))") \\ \#using \ GeometricIntegratorsDiffEq \\ \#try \\ \#sol = solve(prob,GIRadIIA3(),dt=1/10) \\ \#catch \ e \\ \#println(e) \\ \#end
```

The stabilized explicit methods are not stable enough to handle this problem well. While they don't diverge, they are really slow.

```
setups = [
#Dict(:alg=>ROCK2()),
#Dict(:alg=>ROCK4())
#Dict(:alg=>ESERK5())
]
O-element Array{Any,1}
```

0.2 High Tolerances

This is the speed when you just want the answer.

```

0.2.2 Conclusion

At high tolerances, Rosenbrock23 and lsoda hits the the error estimates and are fast. At lower tolerances and normal user tolerances, Rodas5 is extremely fast. When you get down to reltol=1e-10 radau begins to become as efficient as Rodas4, and it continues to do well below that.

```
using SciMLBenchmarks
SciMLBenchmarks.bench_footer(WEAVE_ARGS[:folder],WEAVE_ARGS[:file])
```

0.3 Appendix

These benchmarks are a part of the SciMLBenchmarks.jl repository, found at: https://github.com/SciML, For more information on high-performance scientific machine learning, check out the SciML Open Source Software Organization https://sciml.ai.

To locally run this benchmark, do the following commands:

```
using SciMLBenchmarks
SciMLBenchmarks.weave file("StiffODE","Hires.jmd")
